

# OUR TECHNOLOGY ADVANTAGE

Improved Coverage and Application

Brand X

jMedGuard Standard

- Poor wettability
- Good wettability
- "Patchy" Coating
- Uniform Coating

# MAINTENANCE AND COST-EFFECTIVENESS

## MAINTENANCE TIPS

- Clean regularly to avoid accumulation of dirt and grime on the coated surfaces.
- Clean high-touch / high human traffic surfaces at least once daily (this will allow maximum self-disinfection efficacy)
- Use normal cleaning detergents during regular cleaning to reduce cleaning cost and time

jMedGuard is 50% more costly but lasts 9000% (90 times) longer compared to other disinfectants.

jMedGuard + Daily Simple Cleaning is 57% cheaper than Daily Disinfectant Cleaning.

## OUR ANTIMICROBIAL TECHNOLOGY

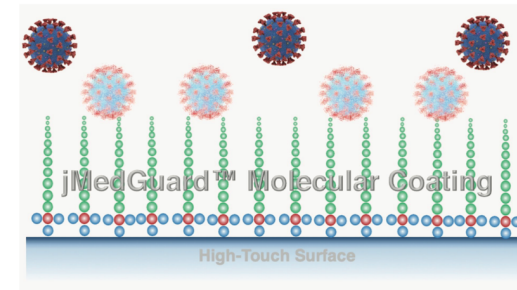

### HOW TO USE

jMedGuard Standard

-  If surface is soiled or oily, prepare surface by wiping it clean before coating treatment.
-  Spray a thin layer of coating solution on the cleaned surface.
-  Wipe and spread the coating solution evenly with a non-absorbent cloth and leave the surface to dry.

### WHY JMEDGUARD STANDARD?

-  Technology backed by medical implant device coating technologies and results backed by Science.
-  Guaranteed to last for 90 days under normal touch conditions. With high human traffic or high levels of wear/tear, more frequent coatings should be considered.
-  EPA certified: Not only kills germs, but is also eco-friendly and safe.
-  Contains Singapore NEA recommended active ingredient effective against Coronaviruses.

- Specially formulated antimicrobial coating attracts microbes that come into contact with the surface.
- Upon contact, molecular structure of the coating effectively twists, ruptures and destroys the membranes of these microbes, killing and deactivating them.
- Amount of pathogens on coated surfaces reduced by 100% in 10 minutes due to special formulation with jMedGuard's Triple Action Germicidal System (TAGS).

### OUR TECHNOLOGY ADVANTAGE

Comparison with other persistent coatings

	BRAND X	jMedGuard
Antimicrobial Effect	✓	✓
Persistent Coating beyond 90 days	✓	✓
Safe and Non-Toxic	✓	✓
Improved Wetting and Spreadability, Ease of Application	✗	✓
Quick Kill 100% Microbial Reduction within 10 minutes	✗	✓
Consistently and Persistently Strong Antimicrobial Effect	✗	✓

### OUR VISION

Guarding you. Protecting the Future.

### OUR MISSION

To revolutionize the cleaning and disinfecting product sector through innovation and development of medically effective solutions for a cleaner and safer future.

jMedGuard™ is a product of constant innovations and development from jMedtech (Singapore) Pte Ltd, the only medtech company in Singapore and first in Asia to provide medical coating for implant devices.

jMedGuard™ was started to provide innovative and medically effective solutions to tackle the threats posed by bacteria, virus, fungi, mould and other microorganisms.

Backed by jMedtech's years of experience in medical coating of precision medical implant devices, such as devices for stent and heart valve deliveries.
